If the Nisitronics driver 6784.x5355.2200.2012.D1 Driver PM287383x2A13 does not

work for you, check if the drivers for the specific device are up to date. You can use DriverMate to update your drivers to the latest version. I've download the driver from I run the.exe file and it return this error. System error: (5) Access is denied. Now i can't work with the device.I've check all rights and security but not found anything. Please help me to fix this problem. Thank you. A: It looks like you don't have sufficient rights to install a driver. In Device Manager, find the device that you're trying to install the driver for. Then, in the right-click menu, select Properties, then Security. You'll see the Permissions tab. If you don't have the necessary rights, you need to change them. Click the Change permission button, and then select the "Everyone" group. Right-click the group and select "Add users or 82157476af
